

## Lean Manufacturing Management Certificate Program

Dear Valued Customer:

J. Ross Publishing is proud to announce our newest line of web-based, adaptive learning modules for the operations management professional. Created in conjunction with best-selling authors and world-class consultants, the **Lean Manufacturing Management Certificate Program** has been designed to deliver the highest quality information on Lean in a state-of-the-art, online environment.

The fully accredited **Lean Manufacturing Management Certificate Program** is made up of five courses:

*Introduction to Lean Manufacturing Management*

*Lean Manufacturing Fundamentals and Implementation*

*Applications of Lean Principles to the Extended Enterprise*

*Inventory Accuracy, Process Controls and Practices*

*Profit-Focused Accounting*

These courses may be taken individually as well depending on your knowledge needs.

Whereas many e-learning products produce a static environment where students must learn in only one manner, our courses feature three learning styles which can be changed at any point as students progress through the course. This dynamic atmosphere is further strengthened by the automatic remediation of the material in the courses based on questions missed on quizzes given throughout the module. It is truly state-of-the-art!

Please review the enclosed brochure for more information on the **Lean Manufacturing Management Certificate Program**. I also encourage you to demo a course on our website, [www.lmmcp.com](http://www.lmmcp.com). If you have any questions, feel free to call me directly at 561-869-3900 x105 or email me at [sbuda@jrosspub.com](mailto:sbuda@jrosspub.com).

Sincerely,

Stephen Buda
